LifeSize®

A division of Logitech

Easily share content wirelessly

from your computer during HD video calls

Traditional data sharing during an HD video call is enabled over a DVI cable connection to the PC or laptop. Now, share data and content from your computer easily and cable-free to any LifeSize® Passport™ or LGExecutive, powered by LifeSize®. The new LifeSize Virtual Link supports data sharing over the network.

Any LifeSize user with a Windows PC or Mac can download the free Virtual Link application. Then, seamlessly share their desktop with remote participants through video calls from LifeSize Passport or the LGExecutive. The presenters do not even have to be in the same room as the video endpoint in order to share content over the network.

No more cables running across the conference table. No more juggling.

LifeSize Virtual Link is designed to be easy to install on the PC or Mac and easy to use by anyone. Quickly add more endpoints via Virtual Link's simple user interface and organize them into a Favorites category for recurring meetings. Easily search for available video endpoints and know the status of the endpoint before starting a presentation.

LifeSize Passport and LGExecutive, with network-based data-sharing, ensure that HD video conferences are as productive and collaborative as they need to be.

Present on your terms.

LifeSize Virtual Link
Key Features

Data transmit	**Optimized for H.264 Data Sharing**
