

# Collaboration Solutions for Small Rooms

Small meeting rooms and huddle spaces designed for workgroups of 2-4 people provide an intimate, versatile and welcoming space for small teams to hold impromptu meetings and brainstorming sessions. With a more efficient use of floor space, organisations can recognise the real cost benefits of these small rooms, whilst improving the quality of interaction between employees & customers.

Whether you are starting from scratch and want to implement high quality features to kick start team collaboration, or you are upgrading an already available space after recognising the benefits of video collaboration elsewhere, it's important to implement a solution designed specifically for these small spaces.

## Consider the size and layout of the room

This will define which video systems and cameras are most suitable, what audio and acoustic considerations need to be made and what is the most suitable furniture and technologies for the space - without going overboard.

## Who and what do you want to collaborate with?

- Are you using other collaborative or UC solutions across your organisation such as Cisco Jabber, WebEx or Lync?
- Do you have other video enabled meeting rooms and want to continue the same look and feel?
- Do your teams use laptops, tablets and mobile devices?
- How important is the visual design?
- And how important is the quality of interaction?

## Recommended Video Solutions to Consider

All-in-one systems such as the **Cisco MX 200 and MX 300** provide a sleek, powerful and high quality experience with extreme ease of use.

Rich 1080p60 video with 42" and 55" screens respectively, these high end systems support features such as *Cisco Intelligent Proximity* for interactive content collaboration to mobiles and wireless sharing from Mac's & PC's.

*The all-in-one Cisco MX 300 and MX200 blends aesthetics, functionality & ease-of-use*

The **Lifesize Icon 400** has been designed purely for the small meeting room and can connect to any professional display, providing 1080p video & content collaboration. Or connect with Skype for Business, Lync, Google Hangouts and Skype with the **Lifesize Icon Flex**.

Pair with the Lifesize Cloud and the Icon comes alive with features including multipoint & VMR's, recording and a shared company directory.

The Lifesize Icon Flex. Connect your laptop and start collaborating.

The **Polycom Group 310** is a simple, compact solution that provides crystal clear video and data, and the ultimate audio clarity Polycom are renowned for. It also gives you access to key features such as *SmartPairing* and *High Profile*.

The Group 310 and Group 500 can be combined with a media package to create a professional integrated solution, the **Polycom Convene**.

The Polycom Convene, all-in-one solution leveraging the powerful Polycom Group series codecs

The compact Cisco SX10

The **Cisco SX10** combines with any flat-panel display and includes an integrated HD camera, microphone and codec. Register it with your Cisco UCM or VCS platform, or the VideoCloud Firewall Traversal service, to bring professional-quality feature-rich collaboration to your huddle room. Plus this compact system can be added to any already installed display, protecting your current investments.

## Recommended AV & Collaborative Technologies to Consider

To assist with effective collaboration within your meeting rooms, whether locally or remote, it is important to consider:

- How your teams will present, and collaborate on content and data
- How content and data will be displayed
- How mobile devices and laptops will connect
- How you will connect with colleagues, clients, customers, suppliers and partners

**SMART Technologies** provide many solutions for interactive collaboration, including SMART Interactive Whiteboards and displays, the SMART Kapp flipchart, and SMART Bridgit remote collaboration software.

**Pair with a video conferencing system** to engage and collaborate with teams wherever they are located, then capture, save and share entire sessions in digital format.

**Secure wireless presentation facilities** designed for small groups provide for easy connectivity from laptops with a simple USB dongle.

Solutions such as the Barco Clickshare makes connecting to a meeting room system and sharing information a matter of clicking a button.

**Cloud solutions** such as the VideoCloud, Lifesize Cloud or Cisco CMR Cloud help you join your teams together and provide an integrated approach to video, audio & data collaboration. Or, if you want to keep things on-premise or integrate with your Lync, WebEx or CUCM platform, **infrastructure, either hardware or virtualised**, can be installed within your network, designed specific to your needs, network design and capabilities.

Other small room considerations:

- Flat-panel displays: 32" to 60", wall or table mounted
- Speaker & microphone units with built in echo-cancellation
- Rollabout trolleys & furniture optimised for chosen technology & placement
- Installation, support & training services

This is just a selection of the solutions on offer to improve video collaboration across your organisation. Highly experience & fully accredited, talk to us today to discover the best solution for your business and small meeting rooms.
