

# Broadband Services

Delivering Bandwidth to Support your Cloud Based Communications

As part of our ongoing drive to support customers with enterprise-wide video communications and collaboration solutions, VideoCentric provides the latest in broadband bandwidth services to customer premises.

Through efficient and effective broadband provision, you can ensure that your communications work, first-time, in the fastest and most reliable way for your organisation. Our Broadband offerings include:

- **Fibre Ethernet** - dedicated Ethernet leased line directly to your premises with speeds up to 100Mbps
- **Ethernet First Mile** - Highly resilient Ethernet up to 20Mbps without contention
- **Super Fast FTTC & FTTP** - Fibre to Cabinet and Fibre to the Premises for those on a lower budget
- **Fibre 40 and Fibre 80** - Want more than EFM but not in need of the full leased line

With many broadband options available, and the ongoing need for growing organisations to upgrade and improve their broadband for communications and digital transformation, we work together with our highly accredited and trusted Broadband partner to help assess your needs professionally and in an unbiased manner, enabling us to recommend, integrate and provide efficient broadband for your business.

Get in touch today to discuss all the options and help you determine which service will fit best with your video communications and collaboration requirement.
