

VideoCentric's Solutions for Microsoft combat the challenges of interoperable communications with your Microsoft UC Environment. Our interconnect solutions enable organisations to professionally collaborate both internally and externally, between the meeting rooms, desktops, laptops and mobile devices.

Utilise both the fantastic features of your Microsoft UC platform alongside the world-leading communications solutions for the meeting room, whilst ensuring everyone can communicate - whoever, wherever and however they choose.

Combat the limitations on telephony features, standards-based interoperability, hands-free audio quality, federation and multipoint video layouts, whilst improving the quality of communications in your meeting spaces.

Allow your customers, suppliers, agents and your mobile workforce using non-Microsoft technologies to communicate with your staff. Meet in a multi-standards Cloud meeting room that works with everything.

Phase in your deployment to avoid an "big bang" disruption and eliminate the risks associated with a full on-premise switch over. Phase-in features to encourage user adoption.

S4B/O365 deployment, SD-WAN, broadband, wireless, security, analytics and performance services all available. Ensure a fully planned, expertly delivered and long-term high performance communications platform.

Tell me more...

Devices for direct integration enable Microsoft to be deployed in the meeting room, huddle room, boardroom and executive suite. Enterprise-grade video, voice and collaboration experiences in every room. A range of solutions and technologies for both Skype for Business and Teams.

Microsoft
in the Meeting Room

Ensure seamless communication with existing investments, partners, customers and clients. Enable Teams and Skype for Business to talk together too. Our solutions will remove islands of interoperability allowing your Microsoft environment to communicate with the rest of the world.

Full interoperability

Enhanced features for professional video collaboration including large multipoint conferences and improved conference layouts such as continuous presence, touch controllers, calendar integration and innovative camera tracking solutions.

Enhanced features

HD-Voice solutions and innovative audio technologies from vendors such as Plantronics (Polycom) deliver the ultimate audio clarity and advanced echo cancellation, overcoming the shortfalls of PC-based technologies in the meeting room.

Extreme Audio & Echo
Cancellation

Get your network backbone right with wireless audits, fibre broadband, SD-WAN and firewall management. Deploy Skype for Business with assistance from Microsoft Gold Certified solution architects, consultants, engineers and technicians.

Security, network & design

For organisations looking to add Teams connectivity or Skype for Business to the meeting room, enhance interoperability and improve their Microsoft Communications deployment with high quality Video, Audio and Data communications in the cloud, VideoCentric's Microsoft Solutions make it possible.
